Extended Your Monitoring Coverage with ScienceLogic

Add WLAN Monitoring for Complete Network Visibility

The ScienceLogic SL1 Platform includes some of the broadest technology monitoring coverage in the industry. Beyond networks, servers, and operating systems, SL1 covers all major public clouds (AWS, Azure, Google, IBM and Aliyun) as well as multiple virtualization solutions (VMware, Hyper-V, Xen and KVM), storage arrays, Unified Communications and Videoconferencing, and wireless.

ScienceLogic Monitors the Entire IT Ecosystem

Power Up with Free PowerPacks

With over 500 PowerPacks spanning over 100 vendors and thousands of device types, ScienceLogic has pre-built PowerPacks for most of the commonly deployed devices and technologies that any customer would need to monitor.

Here are some of the benefits of adding technologies onto the ScienceLogic platform:

- Eliminate Cost and Complexity of Multiple Point Tools
- Single platform handles multi-cloud and hybrid IT use cases
- Benefit from Cross-Domain visibility – servers, networks, cloud and associated storage
- Make operating processes more consistent
- Reduce administrative burden on operations teams
- Private, segmented views for each operations team (network, UC, server, cloud)
- Share views easily with management, internal or external customers

Download and add new PowerPacks at no charge from the ScienceLogic Customer Portal at https://portal.sciencelogic.com

NEW - PowerPack and Device Usage Report

See what you are currently using – and what you are not! Download this report as a PowerPack from the ScienceLogic Customer Portal.

SL1 for Networks

For comprehensive visibility of Wireless LAN components, SL1 provides:

- Discovery and monitoring for Cisco, Meraki and other wireless LAN controllers and Access Points
- Monitors Rx/TX utilization, connected client counts, interface power, noise, CPU, memory and more.
- Collects WLAN Controller and AP configuration settings
- Real-time dashboard views of cloud element performance and availability
- Monitor WLAN controller metrics as well as endpoint status via simple ping checks
- Live relationship mapping shows complete view of WLAN controller deployments
- Alert on failed WLAN elements
- Top N dashboarding shows most/least utilized WLAN components

For organizations currently using ScienceLogic to monitor other network or server environments, extend coverage to include WLAN and Unified Communications visibility and reduce MTTR with rapid triage of problems between WLAN and transport network conditions.

All the above functionality is included in the base platform license – just pay for the devices you monitor.

Enhanced Business Services Visibility

ScienceLogic Business Service functionality groups devices into service-related views and monitors them as a holistic system – while also mapping applications to their underlying IT infrastructure. Newly enhanced Business Services include:

- Applications visibility – see how infrastructure affects application performance
- Business Service dashboard views
- Incident enrichment and automation via integration with ServiceNow

We want our customers to get the most from their investment in ScienceLogic. Check out the Customer Portal at https://portal.sciencelogic.com to see details on all the latest PowerPacks.

About ScienceLogic

ScienceLogic is a leader in IT Operations Management, providing modern IT operations with actionable insights to predict and resolve problems faster in a digital, ephemeral world. Its solution sees everything across cloud and distributed architectures, contextualizes data through relationship mapping, and acts on this insight through integration and automation. Trusted by thousands of organizations, ScienceLogic's technology was designed for the rigorous security requirements of United States Department of Defense, proven for scale by the world's largest service providers, and optimized for the needs of large enterprises.
