restorepoint
A ScienceLogic company

Multi-Vendor Network Configuration and Compliance Management

Restorepoint provides automation and configuration management for your network across hundreds of network, security, and storage vendors.

Your teams benefit from a reduction in manual undifferentiated tasks, reduced risk of manual errors impacting security and availability, and a range of compliance focused auditing and reporting features.

Automated Configuration Management
Hassle free multi-vendor network automation for device configuration changes, scheduled configuration backup, storage, analysis, and verification for network devices.

Perform changes at scale — in seconds — with the knowledge that you can quickly roll-back to any previous configuration if required.

Configuration Monitoring
Automated assessment of configurations against policies, standardized templates and known good baselines with alerting and automated remediation.

Create policies and apply them across your estate, while verifying configurations each time a network device is backed-up.

Compliance Auditing & Reporting
Simple and extendable compliance policy management and auditing for continuous and point in time compliance status validation.

View and compare any previous configuration changes based on your retention requirements.

Multiple Deployment Options

Choose your preferred deployment model with SaaS, physical appliances for your datacenter, virtual devices, and in the cloud.

Deployment	Availability	Multi-Tenancy
Restorepoint is available as a self-contained appliance on VMware, Microsoft Hyper-V and Amazon AWS EC2.	Deploy Restorepoint with the high-availability license for automated recovery from failure of the primary appliance.	Role-based access control and group management allows enterprises and service providers to delegate administration.

BENEFITS

Automate device management and configuration standardization at scale.

Increase security and protect your organization from costly network outages.

Recover from network device failure or configuration errors in seconds.

Secure your configuration backups and protect sensitive configuration data.

Regularly analyze configurations for compliance failures.

Detect configuration changes and baseline violations.

Configuration Management

Device Automation	Automate and manually control devices, push changes to devices and device groups and run custom commands.
Configuration Backup & Restore	Backup configurations automatically, on a schedule and on-demand.
Certified Backups	Backups are secured using AES encryption and integrity verified.
Customizable Asset Inventory	Schedule maintenance and track information with custom asset database.
1-Click Restore	Restore configurations at any time across your estate with 1 click.
Click-to-Terminal	Quickly open a terminal session, record, playback and search administrator activity.
Off-site Backup	Transfer backups securely using SFTP, CIFS or direct to Amazon S3.

Configuration Monitoring

Device Baselining	Manage known-good configurations against organizational or regulatory baselines with mirrored or manually configured templates.
Change Alerting	Automatically detect changes in network configurations and generate alerts through Email, SNMP and Syslog. Integrate with ScienceLogic SL1 for extended use cases.
Change Tracking	View the complete change history for any device and compare changes across your environment.

Compliance Auditing & Reporting

Compliance Policy Management	Get continuous visibility of your networks compliance status - Quickly build network configuration compliance policies with free text, regular expressions or LUA scripts to evaluate multiple conditions programmatically.
Compliance Policy Automation	Test device configurations and automatically remediate compliance violations.
Compliance Reporting	Status dashboard with flexible reporting options.
Compliance Alerting	Detect policy violations faster on the device directly and generate compliance alerts for your wider team. Integrate with ScienceLogic SL1 for extended business services use cases.

About ScienceLogic

ScienceLogic empowers IT operations, freeing up IT talent, accelerating innovation and transformation, and driving business outcomes.

ScienceLogic's AIOps and Observability solutions monitor customer's digital footprint wherever it resides, enabling visibility and improving availability of business services across the organization.

The ScienceLogic platform is able to process trillions of datapoints by building and investing in innovative technologies, transforming data into actionable insights for teams.

Trusted by thousands of organizations across the globe, ScienceLogic's solutions meet the rigorous security requirements of the U.S. Department of Defense (DoD) and has been proven for scale by the world's largest service providers.
