

Autonomic IT Drives the Autonomous Business

Elevate IT and Business Performance While Delivering a Resilient Customer Experience

Digital transformation is happening at a rapid pace. Customers demand always on, always-mobile, instantly accessible experiences even as those experiences rely on ever-more complex technology. In light of these pressures, businesses are reassessing their IT strategies to determine how to deliver increased agility and adapt to new customer demands without increasing operational complexity or downtime.

A New Vision for Business Transformation

Amid constant change and pressure to achieve more with limited resources and staff shortages, IT teams and operational processes are struggling to keep pace with transformation. To keep up and ensure great customer experiences, operations teams need an edge to understand, adopt, and maintain new technology faster, to better connect IT to business outcomes, and to become trusted advisors to the business.

We can see the way forward. One that brings business and operations leaders together to accelerate innovation, drive revenue growth, and ensure superior customer experiences -- a path that unlocks the transformative potential of generative AI and automation, delivering cost-optimized, efficient, scalable and next-level experiences and capabilities to the business.

This is Autonomic IT.

Powered by the SL1 Platform

Go beyond current market offerings to the next generation of innovation and automation.

ScienceLogic delivers global visibility, advanced AI insights, near limitless extensibility, and automation in an integrated platform that helps customers build towards a self-healing, optimized IT ecosystem. This allows operations teams to close visibility gaps, work with uniform data, and quickly identify and resolve issues - enabling enhanced business performance through operational efficiencies and faster delivery of new customer services.

Improve MTTR by 60%+

Let your team focus on innovation, not responding to alert storms and incident tickets.

Slash IT Complexity and Costs

Modernize and unify monitoring tools on one platform.

100% Hybrid Cloud Visibility

Eliminate observability gaps and centralize data collection.

Expedite Trouble Shooting

Accelerate incident resolution by automatically correlating events, finding unseen problems, and fixing them.

Diagnose Root Cause 10x Faster

Apply ML to cut through the noise and diagnose issues faster.

Drastically Reduce Manual Effort

Automate manual actions based on AI/ML driven insights.

ScienceLogic: Delivering Business Service Context from Hybrid Cloud Infrastructure Monitoring

Autonomic IT enabled by the SL1 platform delivers extraordinary outcomes:

-  **Optimize Cost and Operational Agility** – Autonomic IT leverages full stack visibility, automation, and AI to help businesses resolve issues faster, minimize customer disruptions, and deliver innovation to market faster, delivering happier customers and improved EBIDTA.
-  **Improve Profitability of IT Services** – Optimizing digital experience drives immediate value. Autonomic IT delivers unparalleled flexibility to reduce operational expenses by automating formerly manual tasks, freeing up resources and capital to build new value-added services and recurring revenue streams.
-  **Align IT and Business Services** – Unlock business value, drive strategic, and break technology silos outcomes by simplifying complexity. Autonomic IT provides a clear, comprehensive understanding of the health availability risk of each service across the entire technology landscape to ensure the heterogenous technologies work perfectly together, and deliver human-friendly insights to empower proactive decisions for a competitive edge and a tangible impact.
-  **Power IT & Business Acceleration** – Boost productivity and reduce the risk of staff burnout, and empower staff across levels through Autonomic IT's Generative AI-guided automated workflows. By leveraging AI assistance, even Level 1 staff can perform like seasoned Level 3 experts, rapidly adapting to market shifts and customer needs without deep coding knowledge while Level 3 staff focus on higher-value tasks, enabling your business to scale faster and provide greater value at speed.
-  **Mitigate Risk, Fortify Compliance** – Streamline your compliance efforts and quickly generate audit-ready reports vs. manual hand-to-hand combat to create these reports across disparate data sources. Autonomic IT uses generative AI to quickly identify and understand root causes of incidents and spots potential compliance violations before they happen to help minimize business disruption, downtime, and risk.

Go Beyond Expectations with Autonomic IT

Autonomic IT helps businesses reach new levels of success – go beyond the now and realize the potential of tomorrow's autonomous business.
