ScienceLogic

Elevating your Compliance Assurance

Top Reasons Why ScienceLogic is the Preferred Vendor for Meeting Compliance Requirements

Compliance Starts With Solid Foundations

Skylar Compliance (formerly Restorepoint) provides customers with valuable visibility into the assets and services that support IT resiliency and business revenue. That's why building a compliance program begins with understanding what you have and what needs to be protected.

Compliance Assurance Requires Context

In most organizations, everything runs through IT. Skylar Compliance enables customers to map their operational dependencies to business services, so that risk, driven by the health of those services, can be effectively communicated and prioritized.

Understanding Change is the Root of Stability

Configuration changes introduce risks to IT operations, cybersecurity, and compliance, and must be managed quickly and accurately so they must be managed quickly and accurately. . Skylar Compliance automatically recognizes network configuration changes at their origin, augmenting change control processes and providing an easier path to maintaining compliance status.

Leave No Stone Unturned for Total Coverage

Compliance is not limited to any one set of vendors or platforms. You need wide vendor support without implementing manual processes. Skylar Compliance supports hundreds of vendors out-of-the-box, with vendor-native backup and one-click recovery, applying the same technology to perform checks, audits, and backups more reliably and accurately.

Simplify Compliance Processes for Improved Efficiency

Skylar Compliance gives your team a fast, easy-to-use way to understand compliance status across your entire network, remediate and report on any anomalies across your ecosystem. and demonstrate operational processes to auditors. We provide the means to strengthen operational resilience.

Compliance is Not "One-Size-Fits-All"

Skylar One (formerly SL1) and ScienceLogic Restorepoint include a range of options to configure health and change monitoring with no-code, low-code, and extensible scripting enabling customers to ensure compliance while tailoring system visibility to their requirements.

Minimize the Risk of Human Error

Together, Skylar One and Skylar Compliance enable customers to automate manual processes to assure network resilience and compliance with corporate practices. That means your teams can verify changes as they happen and rapidly mitigate the impact of misconfigurations.

Enterprise and Managed Service Ready Solutions

ScienceLogic has built a true, enterprise ready observability platform that provides highly scalable, secure, multitenant, deployments on-premises or in SaaS, allowing you ultimate flexibility based on your business' needs and data security requirements.
